- Professional** → KDL is one of the largest medical needle manufacturers in China.

Product Features

Safety design and easy for using
The strength design in needle set make it more convenient and safe to use

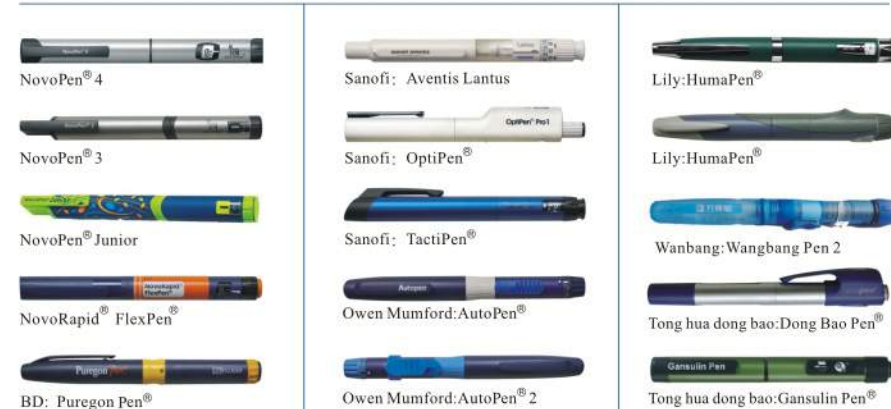

High compatibility and cover almost all branches

The product has high compatibility. The standard design of internal threaded ensure it can stably match all branches insulin pen.

Best penetration make the injection more comfortable

KDL insulin pen needle has a series of advanced and mature needle tip technique and silication technique. The sharp needle tip make puncture more easily and let patients feel more comfortable during injection.

High Matching Degree

The screwthread design of KDL insulin pen needle meets the standards regulated by ISO11608-2, which is compatible with other standard ones domestically produced or imported.

More Comfortable, More Safety

- Sharpening Technique**
International sharpening technique make KDL needle tip has excellent penetration.
- Silication Technique**
The advanced silication technique can lower resistance of needle tip and cannula. Reduce painful feeling of injection and make patients feel more comfortable.
- Thin Wall Stainless Material**
KDL insulin pen needle use thin wall medical stainless material whose inner diameter is larger than the stainless needle with same outer diameter. It ensure insulin injection more fluently and organism can absorb the insulin rapidly.

Needle Structure Parsing
